

page créée le 1 juillet 2025

Brother fabrique ce genre d'étiqueteuse depuis longtemps (celle-ci date de 1997), et les consommables sont toujours disponibles, à priori tous compatibles : il existe des rubans plastiques de couleurs différentes, des rubans tissus pour faire des étiquettes thermocollantes, des gaines thermorétractables, etc. Ainsi que des couleurs d'impression différentes : par exemple encre dorée sur fond noir brillant, noir sur fond argent mat, etc.

- Modèle PT-350 de 1997, autonome (pas de connexion ordi)
- Utilise des rubans TZ ou TZe
- Détails techniques sur la résistance des étiquettes : (TODO pdf)
- largeur des rubans acceptés : 6, 9, 12, 18 ou 24mm
- tête d'impression : 128 points / 180 dpi
- 8 polices différentes en 2 largeurs, 5 tailles, styles d'impression (gras, contour, etc.) symboles,

Fonctionne sur piles / pas réussi avec l'entrée secteur (9.5V, centre négatif), probablement car l'embout n'est pas classique

(TODO photo brochure)

Pour l'utiliser, il est conseillé de s'équiper du mode d'emploi en papier disponible au fablab. Sinon, on peut se référer à celui-ci, d'un modèle différent, au fonctionnement très proche : (TODO pdf)

Les consommables sont toujours disponibles (gamme TZe). Les rubans TZ originaux font 8m de longueur. Aujourd'hui nous n'avons qu'un seul type de ruban «en stock» : noir sur transparent, largeur 24mm (TZ-151)

Références fournies avec l'imprimante :
